Other Python Libraries: Pandas, Requests, Beautiful Soup

About me

Trayan Iliev

– CEO of **IPT – Intellectual Products & Technologies**
http://www.iproduct.org

– Oracle® certified programmer 15+ Y

– end-to-end reactive fullstack apps with Java, ES6+, TypeScript, Angular, React and Vue.js

– 12+ years IT trainer: Spring, Java EE, Node.js, Express, GraphQL, SOA, REST, DDD & Reactive Microservices

– Voxxed Days, jPrime, Java2Days, jProfessionals, BGOUG, BGJUG, DEV.BG speaker

– Organizer RoboLearn hackathons and IoT enthusiast

Where to Find The Code and Materials?

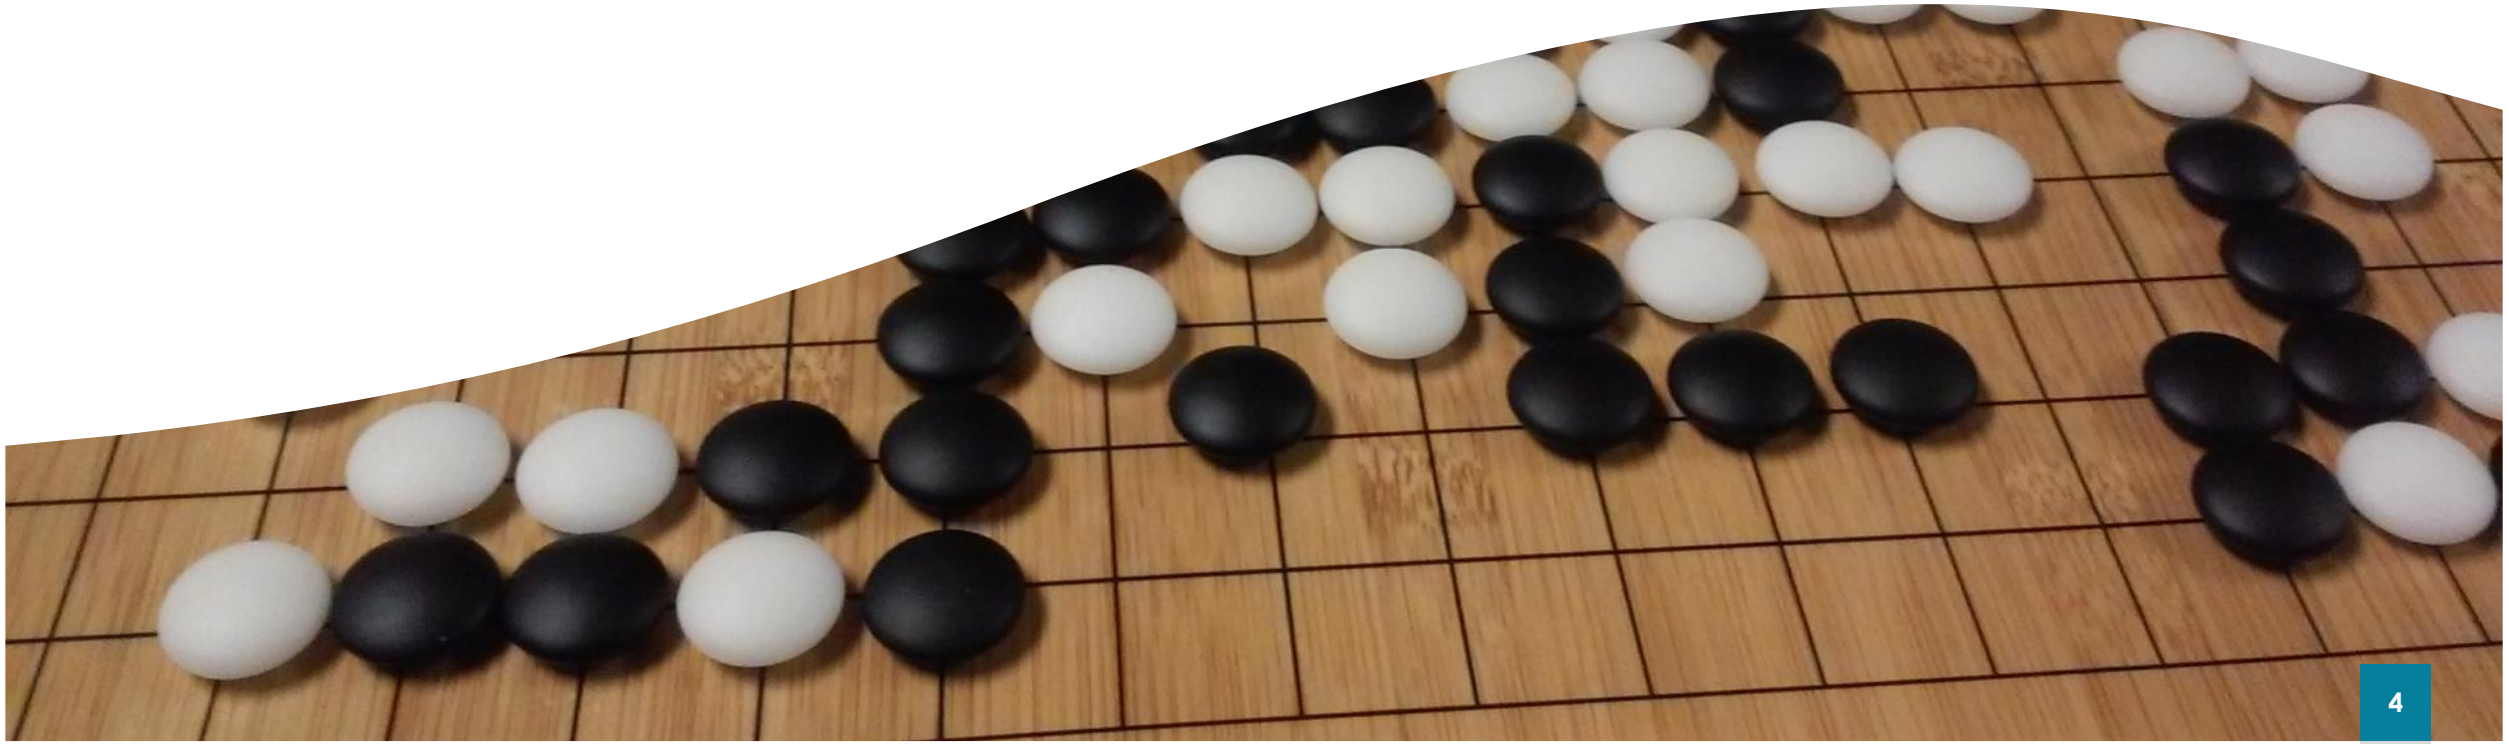
Pandas

Working with dataframes



Pandas [https://www.w3schools.com/python/pandas/default.asp]

- Pandas is a Python library used for working with data sets.
- Fast, flexible, and expressive data structures designed to make working with 'relationa' or 'labeled' data both easy and intuitive. It aims to be the fundamental high-level building block for real world data analysis.
- It has functions for cleaning, exploring, analyzing, and manipulating data.
- "Pandas" name has a reference to "Panel Data", and "Python Data Analysis" - created by Wes McKinney in 2008.
- Pandas allows us to analyze big data and make conclusions based on statistical theories – allows us to answer questions like:
  - is there a correlation between two columns?
  - what is average / max /min value?
  - clean datasets
  - etc.

Pandas DataFrame Example

```
df = pd.DataFrame(
    {
        "Name": [
            "Braund, Mr. Owen Harris",
            "Allen, Mr. William Henry",
            "Bonnell, Miss. Elizabeth",
        ],
        "Age": [22, 35, 58],
        "Sex": ["male", "male", "female"],
    }
)
```

Requests for Humans

Requests – Features: [https://docs.python-requests.org/en/latest/]

- Keep-Alive & Connection Pooling
- International Domains and URLs
- Sessions with Cookie Persistence
- Browser-style SSL Verification
- Automatic Content Decoding
- Basic/Digest Authentication
- Elegant Key/Value Cookies
- Automatic Decompression
- Unicode Response Bodies
- HTTP(S) Proxy Support
- Multipart File Uploads
- Streaming Downloads
- Connection Timeouts
- Chunked Requests
- .netrc Support

Requests [https://docs.python-requests.org/en/latest/]

```
>>> r = requests.get('https://api.github.com/user', auth=('user', 'pass'))

>>> r.status_code

200

>>> r.headers['content-type']

'application/json; charset=utf8'

>>> r.encoding

'utf-8'

>>> r.text

'{"type":"User"...'

>>> r.json()

{'private_gists': 419, 'total_private_repos': 77, ...}
```

Beautiful Soup

Beautiful Soup

[https://www.crummy.com/software/BeautifulSoup/bs4/doc/]

Beautiful Soup is a Python library for pulling data out of HTML and XML files. It works with your favorite parser to provide idiomatic ways of navigating, searching, and modifying the parse tree. It commonly saves programmers hours or days of work.

Thank's for Your Attention!
